Updating Serial Control Records for Call Number Change

Libraries using the Serial Control module will need to update control records to eliminate the recording of enumeration in call number analytics. As a reminder, this change applies only to consumer magazines, newspapers, and trade journals.

- Use the Modify Control and navigate to the Patterns tab. Edit control records to record chronology only. Click Modify Control.

- Navigate to the Expected tab. If there are any predictions dated after January 1, 2019 that include enumeration, remove those predictions and regenerate them to show chronology only.

In the image above, remove the prediction in orange. The prediction in blue is correct.

Once these changes have been made, all future call numbers created when checking in issues will record chronology only.
