Web Accessibility

Jargon

W3C World Wide Web Consortium

The World Wide Web Consortium is an international community where member organizations, a full-time staff, and the public work together to develop web standards. The World Wide Web Consortium develops international standards for the Web: HTML, CSS, and many more.

WAI Web Accessibility Initiative

The W3C Web Accessibility Initiative develops standards and support materials to help you understand and implement accessibility.

Web accessibility means that websites, tools, and technologies are designed and developed so that people with disabilities can use them. More specifically people can:

- Perceive, understand, navigate, and interact with the Web
- Contribute to the web

World Wide Web Consortium W3C

Web Accessibility Initiative WAI

<https://www.w3.org/WAI/fundamentals/accessibility-intro/#context>

Web accessibility encompasses all disabilities that affect access to the Web, Including:

- Auditory
- Cognitive
- Neurological
- Physical
- Speech
- Visual

World Wide Web Consortium W3C

Web Accessibility Initiative WAI

<https://www.w3.org/WAI/fundamentals/accessibility-intro/#context>

Web accessibility also benefits people without disabilities, for example:

- People using mobile phones, smart watches, smart TVs, and other devices with small screens, different input modes, etc.
- Older people with changing abilities due to ageing
- People with “temporary disabilities” such as a broken arm or lost glasses
- People with “situational limitations” such as bright sunlight or in an environment where they cannot listen to audio
- People using a slow internet connection, or who have limited or expensive bandwidth

World Wide Web Consortium W3C

Web Accessibility Initiative WAI
